XX Novel secreted and transmembrane polypeptides useful for diagnosing tumor
PT in a mammal, for identifying agonists and antagonists of the polypeptide
PT and for therapeutic use.
XX Claim 12; Fig 34; 222pp; English.
XX The present sequence represents a secreted or transmembrane polypeptide.
CC The specification describes polypeptides designated PRO1484, PRO4334,
CC PRO1122, PRO1889, PRO1890, PRO1887, PRO1785, PRO4353, PRO4357, PRO4405,
CC PRO4356, PRO4380, PRO4384, PRO4385, PRO4408, PRO5737, PRO4425, PRO5990,
CC PRO6030, PRO4424, PRO4422, PRO4430 and PRO4499. PRO1889 polypeptide is
CC useful for diagnosing tumor in a mammal. The polypeptides, their
CC agonists and antagonists are useful treating a condition associated with
CC expression or activity of the polypeptide. Conditions treated include
CC obesity, diabetes or hyper- or hypo-insulinemia. The polypeptides are
CC capable of inducing proliferation of mammalian kidney mesangial cells and
CC are therefore useful for treating kidney disorders associated with
CC decreased mesangial cell function such as Bercers disease or other
CC nephropathies associated with Schonlein-Henoch purpura, celiac disease,
CC dermatitis herpetiformis or Crohns disease. The nucleic acids may be used
CC to generate transgenic animals for use in development and screening of
CC therapeutically useful reagents and also for chromosome identification
CC and tissue typing

XX New isolated nucleic acid encoding a human hematopoietic stem/precursor
PT cell polypeptide called C17, for increasing the rate of multiplication of
PT mesenchymal stem cells in vitro and for chromosome mapping and DNA
PT fingerprinting.
XX Claim 16; Fig 2; 68pp; English.
XX The present sequence is a human haematopoietic stem/precursor cell
CC (HSPC) polypeptide called C17. The C17 polynucleotide may be used to
CC increase the rate of multiplication of human mesenchymal stem cells in
CC vitro and to determine the presence of growth-stimulating receptors on
CC the surface of a cell. The C17 polypeptide may be used to generate
CC polyclonal sera or monoclonal antibodies specific for C17. The
CC polynucleotide is used as a marker for chromosome mapping and DNA
CC fingerprinting. It is also used in detecting genetic mutations in order
CC to diagnose diseases, such as those affecting bone formation

 XX One hundred and eighty seven nucleic acids encoding PRO polypeptides,
 PT useful in diagnosis and treatment of cardiovascular (e.g. myocardial
 PT infarction), endothelial or angiogenic disorders in a mammal.
 XX Claim 11; Fig 312; 565pp; English.
 XX ABL88072 to ABL88258 encode the PRO proteins given in ABL84817 to
 CC ABL85003. The PRO proteins and polynucleotides have cardiant, cytostatic,
 CC antiangiogenic, hypotensive, vulnerary and antiarteriosclerotic
 CC activities, and can be used in gene therapy. The PRO polynucleotides,
 CC proteins, agonists and antagonists are useful for treating or diagnosing
 CC a cardiovascular, endothelial or angiogenic disorder in a mammal, e.g.
 CC cardiac hypertrophy, trauma, cancer, age-related macular degeneration,
 CC atherosclerosis, hypertension, arterial restenosis, rheumatoid arthritis,
 CC angina, myocardial infarctions, thrombophlebitis, lymphangitis, tumour
 CC angiogenesis [such as breast carcinoma and liver carcinoma] and wound
 CC healing. The PRO polynucleotides have applications in molecular biology,
 CC including use as hybridisation probes, and in chromosome and gene
 CC mapping. ABL88259 to ABL88267 represent primers and probes used in the
 CC exemplification of the present invention

 PT New secreted nucleic acid encoding a polypeptide, designated PRO4425, for
 PT treating bone disorders, such as, osteoarthritis, damage through trauma,
 PT osteoporosis, osteomyelitis, osteogenesis imperfecta, or rheumatoid
 PT arthritis.
 XX
 PS Claim 10; Fig 2; 93pp; English.
 XX
 CC The present sequence represents a human secreted polypeptide, designated
 CC PRO4425. The polypeptide has a calculated molecular weight of 15577
 CC daltons, and a structure that is similar to the interleukin-8 family of
 CC proteins. The PRO4425 polynucleotide and polypeptide are useful for
 CC treating bone disorders, such as osteoarthritis, damage to the bone or
 CC cartilage through trauma, osteoporosis, osteomyelitis, osteogenesis
 CC imperfecta, or rheumatoid arthritis. The nucleic acids are useful as
 CC hybridization probes, in chromosome and gene mapping, and in generating
 CC antisense RNA or DNA. The polypeptides are useful as pharmaceuticals,
 CC diagnostics, biosensors or bioreactors. Both PRO4425 polynucleotide and
 CC polypeptide are useful in tissue typing

 XX Novel isolated PRO polypeptides e.g., PRO4334, PRO1122, PRO1889, PRO1890,
 PT PRO1887, PRO1785, PRO4333, useful for treating sports injuries,
 PT arthritis, diabetes, obesity, hyper- or hypo-insulinaemia.

PS Claim 12; Fig 34; 194pp; English.
 XX The present invention relates to the isolation of novel human PRO
 CC polypeptides, and the polynucleotide sequences encoding them. The PRO
 CC polypeptides are secreted and transmembrane proteins. The PRO
 CC polypeptides and polynucleotides are useful in diagnosing or treating
 CC various bone and/or cartilage disorders (e.g. sports injuries,
 CC arthritis), various insulin deficient states (e.g. diabetes mellitus,
 CC hypo-insulinaemia), obesity, hyper-insulinaemia, haemoglobin-associated
 CC disorders (e.g. thalassaemias), kidney disorders associated with
 CC decreased mesangial cell function (e.g. Berger disease), or other
 CC nephropathies associated with Schonlein-Henoch purpura, celiac disease,
 CC dermatitis herpetiformis or Crohn's disease. The PRO polynucleotide
 CC sequences may be used as hybridisation probes in chromosome and gene
 CC mapping, or in generating antisense RNA and DNA. They are also useful in
 CC preparing PRO polypeptides, in assays to identify other proteins or
 CC molecules involved in binding reaction, to generate transgenic animals or
 CC knockout animals, which in turn are useful in the development and
 CC screening of therapeutically useful reagents, for chromosome
 CC identification, and tissue typing. The PRO polypeptides and nucleic acid
 CC molecules are also useful in gene therapy, and as molecular weight
 CC markers for protein electrophoresis purposes. Anti-PRO antibodies may be
 CC used in diagnostic assays for PRO polypeptides, or for the affinity
 CC purification of the polypeptides from recombinant cell culture or natural
 CC sources. ABU69103-ABU69125 represent the human PRO polypeptides of the
 CC invention.

XX Modulating bone resorption or treating bone resorption disorder, e.g.
PT osteoporosis, osteopetrosis, Paget's disease, osteodystrophy or Van
PT Buchem's disease, comprises administering a HEMAE80 agonist or
PT antagonist.
XX Claim 2; Page 23-24; 27pp; English.
CC The invention relates to modulating bone resorption or treating bone
CC resorption disorder and involves contacting a cell or administering a
CC HEMAE80 agonist or antagonist. The HEMAE80 antagonist is useful for
CC preventing loss of bone mineral density and for treating bone resorption
CC disorders such as osteoporosis, osteopetrosis, Paget's disease,
CC osteodystrophy, a result of a haemopoietic stem/progenitor hyperplasia,
CC or a result of an immune disorder or cancer. HEMAE80 agonists are useful
CC for inhibiting bone deposition and for treating excessive ossification of
CC skeletal bone, ossification of cartilage, or Van Buchem's disease.
CC HEMAE80 may be used to reduce bone mineral density. The present sequence
CC represents a human HEMAE80 polypeptide

 XX New PRO polypeptides and nucleic acid molecules, useful for diagnosing or
 PT treating diabetes mellitus, cancers, septic shock, inflammatory bowel
 PT disease or asthma, or in gene therapy, chromosome identification or
 PT tissue typing.
 XX Claim 12; Fig 34; 196pp; English.
 PS The present invention relates to the isolation of novel human PRO
 CC polypeptides, and the polynucleotide sequences encoding them. The PRO
 CC polypeptides are secreted and transmembrane proteins. The PRO
 CC polypeptides and polynucleotides are useful in diagnosing or treating non
 CC -insulin dependent diabetes mellitus, cancers, septic shock, rheumatoid
 CC arthritis, graft-versus-host disease, stroke, cardiac ischaemia,
 CC psoriasis, inflammatory bowel disease or asthma. The PRO polynucleotide
 CC sequences may be used as hybridisation probes in chromosome and gene
 CC mapping, or in generating antisense RNA and DNA. They are also useful in
 CC preparing PRO polypeptides, in assays to identify other proteins or
 CC molecules involved in binding reaction, to generate transgenic animals or
 CC knockout animals, which in turn are useful in the development and
 CC screening of therapeutically useful reagents, for chromosome
 CC identification, and tissue typing. The PRO polypeptides and nucleic acid
 CC molecules are also useful in gene therapy, and as molecular weight
 CC markers for protein electrophoresis purposes. Anti-PRO antibodies may be
 CC used in diagnostic assays for PRO polypeptides, or for the affinity
 CC purification of the polypeptides from recombinant cell culture or natural
 CC sources. ABU69080-ABU69102 represent the human PRO polypeptides of the
 CC invention.

 XX New secreted and transmembrane nucleic acids and polypeptides, designated
 PT as PRO, useful for treating inflammation, organ failure, atherosclerosis,
 PT cardiac injury, infertility, birth defects, premature aging, AIDS, or
 PT cancer.
 XX Claim 12; Fig 34; 195pp; English.
 PS The invention relates to an isolated nucleic acid that encodes a PRO
 CC polypeptide. The nucleic acids and polypeptides are useful for treating
 CC inflammatory diseases, organ failure, atherosclerosis, cardiac injury,
 CC infertility, birth defects, premature aging, acquired immunodeficiency
 CC syndrome (AIDS), cancer, differentiation disorders, cell adhesion
 CC disorders, neural receptor disorders, skin disorders or diabetic
 CC complications. The nucleic acids are useful as hybridisation probes, in
 CC chromosome and gene mapping and in generating antisense RNA or DNA. The

CC polypeptides are useful as pharmaceuticals, diagnostics, biosensors or
 CC bioreactors. Both are useful in tissue typing. The present sequence
 CC represents the amino acid sequence of a PRO polypeptide of the invention

Novel isolated secreted and transmembrane polypeptides, designated as PRO
 polypeptides e.g. PRO484, PRO4334 and PRO1122, useful for inhibiting
 tumor cell growth, and for preparing medicaments for therapeutic use.

Claim 12; Fig 34; 201pp; English.

The invention describes an isolated secreted and transmembrane PRO
 polypeptide (I), having at least 80% identity to or scoring at least 80%
 positives when compared to, a sequence (SI) comprising 246, 440, 197, 97,
 273, 571, 209, 888, 502, 310, 251, 800, 507, 248, 223, 134, 136, 468,
 328, 221, 194, 899, or 339 amino acids fully defined in the
 specification. An anti-(I)-antibody is useful for determining the
 presence of (I) in a cell. (I) is useful for identifying a compound
 capable of inhibiting the expression and/or activity of (I). (I) and the
 antibody are useful for inhibiting the growth of tumour cells, and for
 the preparation of a medicament useful in the treatment of a condition
 which is responsive to (I) or the antibody. A polynucleotide (II)
 encoding (I) is also useful for isolating full-length PRO cDNA for
 generating transgenic animals or knock-out animals, which are, in turn,
 are useful in the development in the screening of therapeutically useful
 reagents, and in gene therapy. PRO is useful in assays to identify other
 proteins or molecules involved in binding interactions, for screening
 inhibitors or agonists of binding interactions and for screening chemical
 libraries. (I) is useful as molecular weight marker for protein
 electrophoresis, and as therapeutic agents. (I) or (II) is useful for
 tissue typing and for chromosome identification. Ab is useful in
 diagnostic assays for PRO, in affinity purification of PRO, and for
 detection of PRO in biological samples. This is the amino acid sequence
 of a novel human secreted and transmembrane PRO polypeptide.

XX New PRO4425 polypeptide, useful for alleviating/treating and diagnosing
PT bone and cartilage disorders e.g. osteoporosis, and increasing bone
PT growth.
XX
XX Claim 10; Fig 2; 58pp; English.
XX
XX This invention relates to a novel isolated PRO4425 polypeptide and the
XX nucleic acid sequence encoding it, this protein is expressed in early
XX bone and in cartilage and may be used to treat and diagnose bone
XX disorders. The invention also discloses an antibody that specifically
XX binds to the polypeptide and a method for alleviating bone disorders in a
XX mammal by administering a PRO4425 polypeptide or its agonist. The PRO4425
XX protein if the invention may have osteopathic activities and may be used
XX in gene therapy or to develop PRO4425 Agonist. The polypeptides and
XX nucleic acids of the invention are useful for alleviating/treating and
XX diagnosing bone and cartilage disorders, and increasing bone growth in
XX developing or injured bones. They are particularly useful for treating
XX osteoporosis. The present sequence represents the human Pro4425 protein
XX of the invention

pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

SUMMARIES

Result No.	Score	Query Match	Length	ID	Description

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

DR N-PSDB; ABL88227.
XX One hundred and eighty seven nucleic acids encoding PRO polypeptides,
PT useful in diagnosis and treatment of cardiovascular (e.g. myocardial
PT infarction), endothelial or angiogenic disorders in a mammal.
XX Claim 11; Fig 312; 565pp; English.
XX ABL88072 to ABL88258 encode the PRO proteins given in ABL84817 to
CC ABL85003. The PRO proteins and polynucleotides have cardiatic, cytostatic,
CC antiangiogenic, hypotensive, vulnerary and antiarteriosclerotic
CC activities, and can be used in gene therapy. The PRO polynucleotides
CC proteins, agonists and antagonists are useful for treating or diagnosing
CC a cardiovascular, endothelial or angiogenic disorder in a mammal, e.g.
CC cardiac hypertrophy, trauma, cancer, age-related macular degeneration,
CC atherosclerosis, hypertension, arterial restenosis, rheumatoid arthritis,
CC angina, myocardial infarctions, thrombophlebitis, lymphangitis, tumour
CC angiogenesis (such as breast carcinoma and liver carcinoma) and wound
CC healing. The PRO polynucleotides have applications in molecular biology,
CC including use as hybridisation probes, and in chromosome and gene
CC mapping. ABL88259 to ABL88267 represent primers and probes used in the
CC exemplification of the present invention

 XX
 XX New secreted nucleic acid encoding a polypeptide, designated PRO4425, for
 PT treating bone disorders, such as, osteoarthritis, damage through trauma,
 PT osteoporosis, osteomyelitis, osteogenesis imperfecta, or rheumatoid
 PT arthritis.
 XX
 PS Claim 10; Fig 2; 93pp; English.
 XX
 CC The present sequence represents a human secreted polypeptide, designated
 CC PRO4425. The polypeptide has a calculated molecular weight of 15577
 CC daltons, and a structure that is similar to the interleukin-8 family of
 CC proteins. The PRO4425 polynucleotide and polypeptide are useful for
 CC treating bone disorders, such as osteoarthritis, damage to the bone or
 CC cartilage through trauma, osteoporosis, osteomyelitis, osteogenesis
 CC imperfecta, or rheumatoid arthritis. The nucleic acids are useful as
 CC hybridization probes, in chromosome and gene mapping, and in generating
 CC antisense RNA or DNA. The polypeptides are useful as pharmaceuticals,
 CC diagnostics, biosensors or bioreactors. Both PRO4425 polynucleotide and
 CC polypeptide are useful in tissue typing

 XX Novel isolated PRO polypeptides e.g., PRO4334, PRO1122, PRO1889, PRO1890,
 PT PRO1887, PRO1785, PRO4353 useful for treating sports injuries,
 PT arthritis, diabetes, obesity, hyper- or hypo-insulinaemia.
 XX

PS Claim 12; Fig 34; 194pp; English.
 XX The present invention relates to the isolation of novel human PRO
 CC polypeptides, and the polynucleotide sequences encoding them. The PRO
 CC polypeptides are secreted and transmembrane proteins. The PRO
 CC polypeptides and polynucleotides are useful in diagnosing or treating
 CC various bone and/or cartilage disorders (e.g. sports injuries,
 CC arthritis), various insulin deficient states (e.g. diabetes mellitus,
 CC hypo-insulinaemia), obesity, hyper-insulinaemia, haemoglobin-associated
 CC disorders (e.g. thalassaemia), kidney disorders associated with
 CC decreased mesangial cell function (e.g. Berger disease), or other
 CC nephropathies associated with Schonlein-Henoch purpura, celiac disease,
 CC dermatitis herpetiformis or Crohn's disease. The PRO polynucleotide
 CC sequences may be used as hybridisation probes in chromosome and gene
 CC mapping, or in generating antisense RNA and DNA. They are also useful in
 CC preparing PRO polypeptides, in assays to identify other proteins or
 CC molecules involved in binding reaction, to generate transgenic animals or
 CC knockout animals, which in turn are useful in the development and
 CC screening of therapeutically useful reagents, for chromosome
 CC identification, and tissue typing. The PRO polypeptides and nucleic acid
 CC molecules are also useful in gene therapy, and as molecular weight
 CC markers for protein electrophoresis purposes. Anti-PRO antibodies may be
 CC used in diagnostic assays for PRO polypeptides, or for the affinity
 CC purification of the polypeptides from recombinant cell culture or natural
 CC sources. ABU69103-ABU69125 represent the human PRO polypeptides of the
 CC invention

 XX New PRO polypeptides and nucleic acid molecules, useful for diagnosing or
 PT treating diabetes mellitus, cancers, septic shock, inflammatory bowel
 PT disease or asthma, or in gene therapy, chromosome identification or
 PT tissue typing.
 XX Claim 12; Fig 34; 196pp; English.
 XX The present invention relates to the isolation of novel human PRO
 CC polypeptides, and the polynucleotide sequences encoding them. The PRO
 CC polypeptides are secreted and transmembrane proteins. The PRO
 CC polypeptides and polynucleotides are useful in diagnosing or treating non
 CC -insulin dependent diabetes mellitus, cancers, septic shock, rheumatoid
 CC arthritis, graft-versus-host disease, stroke, cardiac ischaemia,
 CC psoriasis, inflammatory bowel disease or asthma. The PRO polynucleotide
 CC sequences may be used as hybridisation probes in chromosome and gene
 CC mapping, or in generating antisense RNA and DNA. They are also useful in
 CC preparing PRO polypeptides, in assays to identify other proteins or
 CC molecules involved in binding reaction, to generate transgenic animals or
 CC knockout animals, which in turn are useful in the development and
 CC screening of therapeutically useful reagents, for chromosome
 CC identification, and tissue typing. The PRO polypeptides and nucleic acid
 CC molecules are also useful in gene therapy, and as molecular weight
 CC markers for protein electrophoresis purposes. Anti-PRO antibodies may be
 CC used in diagnostic assays for PRO polypeptides, or for the affinity
 CC purification of the polypeptides from recombinant cell culture or natural
 CC sources. ABU69080-ABU69102 represent the human PRO polypeptides of the
 CC invention

Novel isolated secreted and transmembrane polypeptides, designated as PRO polypeptides e.g. PRO1484, PRO4334 and PRO1122, useful for inhibiting tumor cell growth, and for preparing medicaments for therapeutic use.

Claim 12; Fig 34; 201pp; English.

The invention describes an isolated secreted and transmembrane PRO polypeptide (I), having at least 80% identity to or scoring at least 80% positives when compared to, a sequence (S1) comprising 246, 440, 197, 97, 273, 571, 294, 888, 502, 310, 251, 800, 507, 248, 223, 134, 136, 468, 328, 221, 194, 899, or 339 amino acids fully defined in the specification. An anti-(I)-antibody is useful for determining the presence of (I) in a cell. (I) is useful for identifying a compound capable of inhibiting the expression and/or activity of (I). (I) and the antibody are useful for inhibiting the growth of tumour cells, and for the preparation of a medicament useful in the treatment of a condition which is responsive to (I) or the antibody. A polynucleotide (II) encoding (I) is also useful for isolating full-length PRO cDNA for generating transgenic animals or knock-out animals, which are, in turn, are useful in the development in the screening of therapeutically useful reagents, and in gene therapy. PRO is useful in assays to identify other proteins or molecules involved in binding interactions, for screening inhibitors or agonists of binding interactions and for screening chemical libraries. (I) is useful as molecular weight marker for protein electrophoresis, and as therapeutic agents. (I) or (II) is useful for tissue typing and for chromosome identification. Ab is useful in diagnostic assays for PRO, in affinity purification of PRO, and for detection of PRO in biological samples. This is the amino acid sequence of a novel human secreted and transmembrane PRO polypeptide.

XX New Pro4425 polypeptide, useful for alleviating/treating and diagnosing
PT bone and cartilage disorders e.g. osteoporosis, and increasing bone
PT growth.
XX
XX Claim 10; Fig 2; 58pp; English.
XX
XX This invention relates to a novel isolated PRO4425 polypeptide and the
CC nucleic acid sequence encoding it, this protein is expressed in early
CC bone and in cartilage and may be used to treat and diagnose bone
CC disorders. The invention also discloses an antibody that specifically
CC binds to the polypeptide and a method for alleviating bone disorders in a
CC mammal by administering a PRO4425 polypeptide or its agonist. The Pro4425
CC protein if the invention may have osteopathic activities and may be used
CC in gene therapy or to develop PRO4425 Agonist. The polypeptides and
CC nucleic acids of the invention are useful for alleviating/treating and
CC diagnosing bone and cartilage disorders, and increasing bone growth in
CC developing or injured bones. They are particularly useful for treating
CC osteoporosis. The present sequence represents the human Pro4425 protein
CC of the invention

 XX Novel secreted and transmembrane polypeptide for identifying agonists or
 PT antagonists of polypeptide, and as molecular weight markers.
 XX Claim 12; Fig 34; 195pp; English.
 XX The invention relates to an isolated, secreted and transmembrane
 CC polypeptide, termed PRO polypeptide, PRO having at least 80 % sequence
 CC identity to any one of the 23 100-900 residue amino acid sequences, given
 CC in the specification or to a sequence encoded by a nucleic acid molecule
 CC deposited under any one of the ATCC accession numbers given in the
 CC specification. Also included are an isolated nucleic acid molecule having
 CC at least 80 % sequence identity to any one of 23 400-3500 nucleotide
 CC sequences given in the specification, (or a nucleotide sequence encoding
 CC PRO, a full-length PRO coding sequence, a full-length coding sequence of
 CC DNA deposited under any ATCC accession number given in the specification)
 CC or at least 80 % identity to a nucleotide sequence encoding PRO, lacking
 CC its associated signal peptide, a sequence encoding extracellular domain
 CC of PRO with or without its associated signal peptide, a vector comprising
 CC the PRO nucleic acid, a host cell comprising the vector, preparation of
 CC PRO, a chimeric molecule comprising PRO fused to a heterologous amino
 CC acid sequence and an anti-PRO antibody. PRO is useful for identifying
 CC anti/agonists or antagonists of PRO, preparing a variant of PRO, as
 CC molecular weight markers and PRO nucleic acid is useful for recombinantly
 CC expressing those markers. PRO is also useful as therapeutic agent. PRO is
 CC useful in assays to identify molecules or proteins which bind to PRO and
 CC for identifying inhibitors of PRO. PRO nucleic acid is useful as a
 CC hybridisation probe, in chromosome and gene mapping, in generation of
 CC antisense RNA and DNA, for generating transgenic animals or knockout
 CC animals which in turn are useful in the development and screening of
 CC therapeutically useful reagents. PRO nucleic acid is also useful in
 CC mapping the gene which encodes the PRO and for the genetic analysis of
 CC individuals with genetic disorders, in gene therapy, for chromosome
 CC identification, as chromosome marker, and for generating probes for PCR,
 CC Northern analysis, Southern analysis and Western analysis. The antibody
 CC useful in diagnostic assays for PRO, for affinity purification of PRO,
 CC and for treating septic shock. PRO or the antibody is useful for the
 CC preparation of medicament for treating conditions which is responsive to
 CC the PRO polypeptide or anti-PRO antibody. PRO and PRO nucleic acid are
 CC useful for tissue typing. The present sequence represents a PRO protein

XX
PT New isolated, secreted and transmembrane PRO polypeptides and nucleic
PT acids, useful for diagnosing, preventing and/or treating inflammation,
PT nephropathies, bone and cartilage disorders, and diabetes.
XX
PS Claim 12; Fig 34; 203pp; English.
XX
CC The invention relates to an isolated nucleic acid that encodes a PRO
CC polypeptide. The methods and compositions of the present invention are
CC useful for the diagnosis, prevention and/or treatment of inflammation,
CC nephropathies, bone and cartilage disorders, such as arthritis and
CC disorders that affect glucose or free fatty acid (FFA) uptake, such as
CC diabetes, hypoinulinaemia or hyperinsulinaemia. The PRO polypeptides are
CC also useful as molecular weight markers or for chromosome identification.
CC The PRO genes are useful as hybridisation probes or for screening
CC libraries of human cDNA, genomic DNA or mRNA. The PRO genes may also be
CC used in gene therapy and antisense therapy. The present sequence is human
CC PRO protein

 RT "Proviral rearrangements and overexpression of a new cellular gene
 (nov) in myeloblastosis-associated virus type 1-induced
 nephroblastomas";
 RT Mol. Cell. Biol. 12:10-21(1992).
 CC -i- FUNCTION. IMMEDIATE-EARLY PROTEIN LIKELY TO PLAY A ROLE IN CELL
 GROWTH REGULATION. ITS OVEREXPRESSION IS ASSOCIATED WITH
 TUMORIGENESIS AND EXPRESSION OF A N-TERMINAL-TRUNCATED VERSION
 OF NOV GENE IN CHICKEN EMBRYONIC FIBROBLASTS (CEF) IS SUFFICIENT
 TO INDUCE THE TRANSFORMATION OF CEF IN VITRO.
 CC -i- SUBCELLULAR LOCATION: Secreted.

CC -1- TISSUE SPECIFICITY: BRAIN AND HEART, AND AT A LOWER LEVEL IN
 CC MUSCLE AND INTESTINE, IN THE EMBRYO, LUNG AND LESS SO IN BRAIN AND
 CC SPLEEN, IN ADULT CHICKEN.
 CC -1- DEVELOPMENTAL STAGE: NAVI-INDUCED NEPHROBLASTOMAS EXPRESS A HIGH
 CC LEVEL OF NOV GENE WHOSE TRANSCRIPTION IS NORMALLY ARRESTED IN
 CC ADULT KIDNEY.
 CC -1- SIMILARITY: Belongs to the CCN family.
 CC -1- SIMILARITY: Contains 1 IGFBP domain.
 CC -1- SIMILARITY: Contains 1 WFPC domain.
 CC -1- SIMILARITY: Contains 1 TSP type-1 domain.
 CC -1- SIMILARITY: Contains 1 C-terminal cysteine knot-like (CTCK) domain.

 CC -|- FUNCTION: Endopeptidase that degrades various components of the
 CC extracellular matrix, such as collagen. Activates procollagenase A.
 CC Essential for pericellular collagenolysis and modeling of skeletal
 CC and extracellular connective tissues during development.
 CC -|- CATALYTIC ACTIVITY: Endopeptidase activity. Activates
 CC procollagenase A by cleavage of the propeptide at 37-Asn-|-Leu-38.
 CC Other bonds hydrolyzed include 35-Gly-|-Ile-36 in the propeptide
 CC of collagenase 3 and 341-Asn-|-Phe-342, 441-Asp-|-Leu-442 and
 CC 354-Gln-|-Thr-355 in the aggrecan interglobular domain.
 CC -|- COFACTOR: Binds 1 zinc ion per subunit, calcium (By similarity).
 CC -|- SUBCELLULAR LOCATION: Type I membrane protein (Potential).
 CC -|- TISSUE SPECIFICITY: Highly expressed in placenta, kidney, heart,
 CC lung, embryonic skeletal and periskeletal tissues.
 CC -|- DEVELOPMENTAL STAGE: Not detected before day 10.5. At day 12.5,
 CC prominently expressed in large arteries and the umbilical
 CC arteries, expressed at lower levels in the myocardium,
 CC craniofacial mesenchyme, nasal epithelium and liver capsule. At
 CC days 14.5 and 17.5, expressed in the musculoskeletal system, and

ossification areas, with continued expression in the arterial tunica media.
CC CC -|- P1M: The precursor is cleaved by a furin endopeptidase (By similarity).
CC CC -|- SIMILARITY: Belongs to peptidase family M10A.
CC CC -|- SIMILARITY: Contains 1 hemopexin-like domain.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RP SEQUENCE OF 307-592 FROM N.A.
RX MEDLINE=20245319; PubMed=10781956;
RA Stark M.R., Biggs J.J., Schoenwolf G.C., Rao M.S.;
RT "Characterization of avian frizzled genes in cranial placode
development";
RL Mech. Dev. 93:195-200(2000).
CC -!- FUNCTION: Receptor for Wnt proteins. Most of frizzled receptors
are coupled to the beta-catenin canonical signaling pathway, which
leads to the activation of dishevelled proteins, inhibition of
GSK-3 kinase, nuclear accumulation of beta-catenin and activation
of Wnt target genes. A second signaling pathway involving PKC and
calcium fluxes has been seen for some family members, but it is
not yet clear if it represents a distinct pathway or if it can be
integrated in the canonical pathway, as PKC seems to be required
for Wnt-mediated inactivation of GSK-3 kinase. Both pathways seem
to involve interactions with G-proteins. May be involved in
transduction and intercellular transmission of polarity
information during tissue morphogenesis and/or in differentiated
tissues.
CC -!- SUBCELLULAR LOCATION: Integral membrane protein.

CC -!- TISSUE SPECIFICITY: Expressed in the lens, otic placode (medial
wall of the vesicle) and in epibranchial placode. Also expressed
in the developing somites (dermomyotome).
CC -!- DEVELOPMENTAL STAGE: Somites and placodal expression appears at
stage 9. At this stage, more obvious expression is detected in the
neural tube (midbrain and rostral hindbrain), and persists through
about stage 15. Strongly expressed in the ectoderm and around the
otic placodes at stage 12. At stage 16, otic expression declines,
expression in epibranchial placodes begins and peaks at stage 20.
Expression in the lens of the eye is first seen at about stage 15,
more evident at stage 16. At stage 17, seen in the ectoderm and
mesenchyme of the limb primordia. Detected at stage 20 in the lip
of the optic cup, in the mesenchyme surrounding the eye, in the
ectoderm overlying the lens and in the ectoderm caudal and ventral
of the olfactory placodes. From stages 20-30, expressed in
cartilage and in the dermomyotomes and migrating sclerotomal cells
forming vertebrae.
CC -!- DOMAIN: Lys-Thr-X-X-Trp motif is involved in the activation of
the Wnt/beta-catenin signaling pathway (By similarity).
CC -!- DOMAIN: The FZ domain is involved in binding with Wnt ligands (By
similarity).
CC -!- SIMILARITY: Belongs to the Fz/Smo G-protein coupled receptor
family.
CC -!- SIMILARITY: Contains 1 frizzled (FZ) domain.

CC !- FUNCTION: Factor XII is a serum glycoprotein that participates in the initiation of blood coagulation, fibrinolysis, and the generation of bradykinin and angiotensin.
CC !- CATALYTIC ACTIVITY: Cleaves selectively Arg-|-Ile bonds in factor VII to form factor VIIa and factor XI to form factor Xla.
CC !- PTM: O- AND N-GLYCOSYLATED.
CC !- DISEASE: Defects in F12 do not cause any clinical symptoms. The sole effect is that whole-blood clotting time is prolonged.
CC !- MISCELLANEOUS: Factor XII, prekallikrein, and HMW kininogen form a complex bound to an anionic surface. Prekallikrein is cleaved by factor XII to form kallikrein, which then cleaves factor XII first to alpha-factor Xlla and then to beta-factor Xlla. Alpha-factor Xlla activates factor XI to factor Xla.
CC !- SIMILARITY: Belongs to peptidase family S1.
CC !- SIMILARITY: Contains 2 EGF-like domains.
CC !- SIMILARITY: Contains 1 fibronectin type I domain.
CC !- SIMILARITY: Contains 1 fibronectin type II domain.
CC !- SIMILARITY: Contains 1 kringle domain.

 RL -!- FUNCTION: This is a receptor for interleukin 3.
 CC -!- SUBUNIT: Heterodimer of an alpha and a beta chain which is shared
 CC by the interleukin 3, interleukin 5, and GM-CSF receptors.
 CC -!- SUBCELLULAR LOCATION: Type I membrane protein.
 CC -!- SIMILARITY: Belongs to the type I cytokine family of receptors.

CC Subfamily 5.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
